Here I selected two dishes they came with normal portion as its takeaway price in my scenario, so if take out comes no need to select automation command.

This will work after ticket closing too. If some customer called and placed order than came to pick but changed mind would like to eat just open ticket and select dine-in

*I can't figure it out with one button value changes as this will save space on screen

*Also How to track Sales of Take Away and Dine-in?

*And need to figure out Ticket and Kitchen Print with Price tag

If it meets the above then this wil suite more for me

****may be implement another price tag with discounts or vip price or something else

Looking for suggestions and improvements thanking you.
